Welcome to our **Monday Solutions Edition** with curated news of the day and memes at bottom. Today's solutions include spike protein detoxification and other health-promoting resources, a number of low-cost home-building options, an inspiring permaculture community plan, more food preservation how-to's, promising developments in renewable energy and battery tech, a worthy micropayments system, a new educational model in Montreal, several articles for rebuilding social trust, and much more.

On the local front, join us in Keene **Thursday March 16 6PM** for a **Community Game and Acoustic Music Jam** Evening, and on **Saturday April 1 at 10:30AM** for our fledgling **LETS Barter** experiment -- see the Events section below for details.

Please join us at 1PM today for our community zoom conversation.

Organic Produce in Acworth

- Garden access will be run as a P. M. A.

- The details are still being worked out and adjustments will be made as necessary, but the newly-established gardens will be planted this spring with a variety of vegetables. Some medicinal herb plant starts will be available as well.
- Initially either “pick your own” or order ahead to have produce ready for pick-up.

- 1.) If the needle goes into a vein or a capillary bed, those particles will rapidly spread to your heart and to your brain, increasing your chances of neurologic and cardiac symptoms.
- 2.) The number of particles in each syringe can vary tenfold.
- 3.) If the polyethylene glycol degrades, you could have a stroke or deadly heart attack within minutes.
- 4.) The mRNA can degrade, which would lessen the chance of side effects.
- 5.) The more acidic your body is, the more spike proteins you will make.

Take away: 232.7 barrels of oil to make each EV battery, but over its lifespan it will only replace 150 barrels IF you are lucky. Net loser.

Sure, here is a breakdown of the estimated energy costs for a single Tesla Model S Long Range battery pack, expressed in kilowatt-hours (kWh) at each stage, as well as their conversion to barrels of oil equivalent:

Item	Energy Cost (kWh)	Barrels of Oil Equivalent	Total Energy Cost (Barrels of Oil Equivalent)
Battery Production	15,000	8.8	8.8
Lithium Extraction	1,890	1.1	9.9
Lithium Transportation	6,480	3.8	13.7
Gigafactory Construction	1,050	0.6	14.3
Battery Transportation	5,400	3.2	17.5
Battery Recycling	81	0.05	17.6
Diesel Fuel for Battery Charging	366,725	215.1	232.7
Battery Disposal	\$5,400	0.003	232.7
Environmental Costs of Battery Fires	\$30	0.00002	232.7
Total Energy Cost			232.7

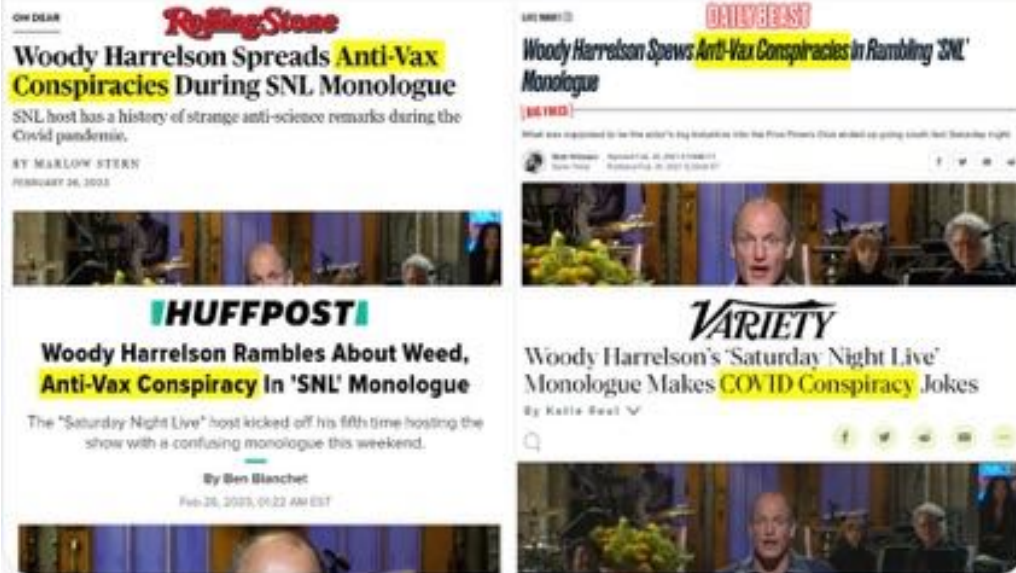

Note that these estimates are based on several assumptions and should be taken as a rough approximation. The actual energy cost of producing and using an electric vehicle battery can vary depending on several factors, such as the specific make and model of the vehicle, the efficiency of the battery and powertrain, the source and mix of energy used to generate electricity, and the environmental and social impacts of battery disposal and battery fires. Nonetheless, this analysis highlights the importance of considering the full energy cost of electric vehicle batteries when assessing the overall sustainability and environmental impact of electric vehicles.
